

OS Theory Concept Map

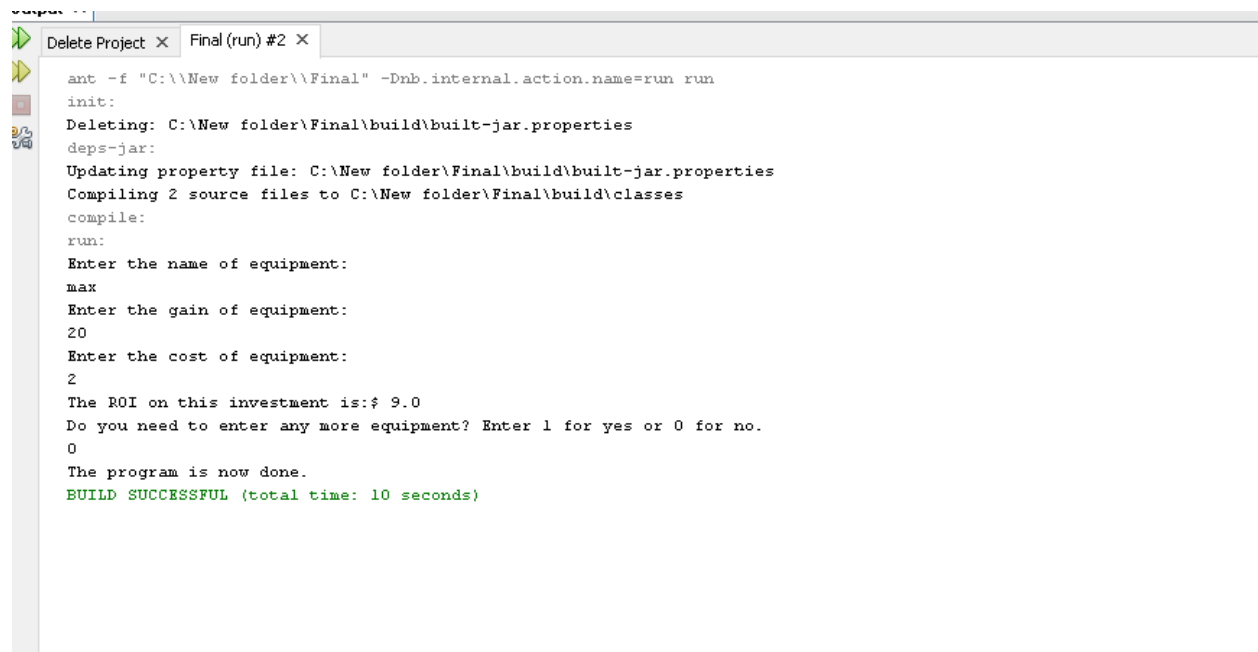

Tyler Chotikamars

CPT304: Operating Systems Theory & Design

Michael Hayden

4/5/2021

I am re-submitting this assignment upon seeing the sample code that you posted in the announcements. I think that if I had checked the announcements earlier, I could have been satisfied with what I could have done with the assignment.

```
ant -f "C:\New folder\Final" -Dnb.internal.action.name=run run
init:
Deleting: C:\New folder\Final\build\build-jar.properties
deps-jar:
Updating property file: C:\New folder\Final\build\build-jar.properties
Compiling 2 source files to C:\New folder\Final\build\classes
compile:
run:
Enter the name of equipment:
max
Enter the gain of equipment:
20
Enter the cost of equipment:
2
The ROI on this investment is:$ 9.0
Do you need to enter any more equipment? Enter 1 for yes or 0 for no.
0
The program is now done.
BUILD SUCCESSFUL (total time: 10 seconds)
```

```
import java.util.LinkedList;
import java.util.Scanner;
public class ROIProgram {

    public static void main(String[] args)
    {
        Scanner in = new Scanner(System.in);
        String equip;
        double cost;
        double gain;
        double ROI;
        int i=1;
```

```

LinkedList<Node> list;
list = new LinkedList<>();
while(i==1){

    System.out.println("Enter the name of equipment: ");
    equip= in.nextLine();

    System.out.println("Enter the gain of equipment: ");
    gain= in.nextDouble();
    in.nextLine();

    System.out.println("Enter the cost of equipment: ");
    cost= in.nextDouble();
    in.nextLine();

    ROI=(gain-cost)/cost;

    list.add(new Node(equip, cost, gain, ROI));
    System.out.println("Do you need to enter any more equipment? Enter 1 for yes or 0 for
no. ");
    i= in.nextInt();
    in.nextLine();
    System.out.println("The program is now done.");
}

}

}

import java.util.Scanner;

```

```

import java.text.DecimalFormat;
import java.util.LinkedList;
class Node {

    public String equipment;
    public double cost;
    public double gain;
    public double ROI;
    public double ROI2;
    public double ROI3;
    public Node(String equipment1 , double gain1 , double cost1, double ROI1 ){
        this.equipment=equipment1;
        this.cost=cost1;
        this.gain=gain1;
        this.ROI=ROI1;
        System.out.println("The ROI on this investment is:$ " + ROI1);

    }
}

```
